

A system, method and article of manufacture are provided for tax form submittal verification. First, a tax form of a user is sent to a third party government entity utilizing a network. Next, a record of the sent tax form is stored in a database. Thereafter, a request for the record is received from the user utilizing the network. An identity of the user is then authenticated utilizing the network. Upon the successful authentication of the identity of the user, the record is sent to the user utilizing the network.
